MicroSol® 590XT

Advanced Technology Aerospace Semisynthetic

TRIM® MicroSol® 590XT is an environmentally-friendly semisynthetic, microemulsion coolant formulated to pass aerospace approval test requirements. It utilises the newest technology to provide long life and excellent protection of sensitive alloys. MicroSol 590XT improves on the proven performance of previous generations with a robust stability package using the most environmentally-safe ingredients. The formula is a favorite of environmental advocates, safety professionals, and demanding production managers.

MicroSol

MicroSol 590XT In Action:
A Pacific Northwest aerospace manufacturer machines aluminum, titanium, stainless, and Inconel® for Tier 1 and Prime OEM customers. Their previous coolant had the necessary aerospace approvals, but still caused odour, residue, and foaming issues. With a switch to MicroSol 590XT, foam, foul odour, and residue problems are gone, and they record excellent tool life, surface finish, and overall cost savings.

Choose MicroSol 590XT:
- Meets the most stringent aerospace specifications
- Protects and prevents corrosion on sensitive alloys, including aerospace and nuclear materials
- Free of chlorine, formaldehyde releasers, phenols, boron, and secondary amines
- Dramatically extends useful life without the need for tank-side biocides or fungicides
- Low foaming for todays demanding high-pressure, high-volume applications
- Optimised combination of cooling and lubricity for titanium, aluminium, steel, stainless steel, and Inconel® machining applications
- Excellent alternative to milky soluble oils on high-silica aluminium alloys
- Provides superior corrosion inhibition on all ferrous and nonferrous metals
- Keeps parts and machines very clean to reduce maintenance and production time

MicroSol 590XT especially for:
Applications — band sawing, belt grinding, Blanchard grinding, corrosion inhibition, cylindrical form grinding, double disc grinding, drilling, high-pressure, high-volume, in-feed centerless grinding, internal grinding, plain grinding, reaming, roll threading, surface grinding, surface milling, tapping, thread forming, through-feed centerless grinding, turning
Metals — 6000 series aluminium, aerospace aluminium alloys, aluminium, brass, bronze, cast aluminium, composites, copper, exotic alloys, glass, heat-treated steel, high-carbon steel, high-nickel alloys, Inconel®, stainless steels, steels, titanium and wrought aluminium
Industries — aerospace
MicroSol 590XT is free of — boron, chlorine, DCHA, formaldehyde releasers, phenols, secondary amines
MicroSol® 590XT
Advanced Technology Aerospace Semisynthetic

Application Guidelines
- MicroSol 590XT performs well where traditional soluble oils may not cool sufficiently.
- In mixed-metal situations, concentration control is critical to fight galvanic corrosion (7.5% plus).
- Running at or above 7.5% offers the best sump life and corrosion inhibition on cast iron chips.
- MicroSol 590XT is not recommended for use on very reactive metals such as magnesium.
- For additional product application information, including performance optimisation, please contact your Master Fluid Solutions’ Authorised Distributor at https://www.2trim.us/distributors.php, your District Sales Manager, or call our Tech Line at +49 211 77 92 85 - 13.

Concentration by % Brix

% Concentration = Refractive Reading x Refractive Factor

Coolant Refractometer Factor % Brix = 1.7

Concentration by Titration

% Concentration = No. of Drops x Titration Factor

Titration Factor = 0.75

Health and Safety
For further information, see the most recent SDS which is available directly from Master Fluid Solutions or from your Master Fluid Solutions’ Authorised Distributor.
Mixing Instructions

- Recommended usage concentration in water: 4.0% - 10.0%.
- To help ensure the best possible working solution, add the required amount of concentrate to the required amount of water (never the reverse) and stir until uniformly mixed.
- Use premixed coolant as makeup to improve coolant performance and reduce coolant purchases. The makeup you select should balance the water evaporation rate with the coolant carryout rate. Use our Coolant Makeup Calculator to find the best ratio for your machine: apps.masterfluidsolutions.com/makeup/.
- Use mineral-free water to improve sump life and corrosion inhibition while reducing carryoff and concentrate usage.
